this volume attempts to solve a grave problem about critical self reflection the worry is that we critical thinkers are all in epistemic bad

faith in light of what psychology tells us after all the research shows not merely that we are bad at detecting ego threatening thoughts à la freud it also indicates that we are ignorant of even our ordinary thoughts e g reasons for our moral judgments of others haidt 2001 and even mundane reasons for buying one pair of stockings over another nisbett wilson 1977 however reflection on one s thoughts requires knowing what those thoughts are in the first place so if ignorance is the norm why attempt self reflection the activity would just display naivety about psychology yet while respecting all the data this book argues that remarkably we are sometimes infallible in our self discerning judgments even so infallibility does not imply indubitability and there is no cartesian ambition to provide a foundation for empirical knowledge the point is rather to explain how self reflection as a rational activity is possible

design and applications of nano materials for sensors begins with an introductory contribution by the editors that gives an overview of the present state of computational and theoretical methods for nanotechnology outlines hot topics in this field and points to expected developments in the near future this general introduction is followed by 15 30 review chapters by invited experts who have substantially contributed to the recent developments of nano materials for sensors guided by molecular and quantum theories this contributed volume gives a broad picture of the current and past advances that were necessary to develop nano sensors using nano materials to illustrate the important and relevant applications of nano materials design and applications of nano materials for sensors focuses on recent advances that extend the scope of possible applications of the theory improve the accuracy with respect to experimentation and reduce the cost of these calculations this volume also features new applications of theoretical chemistry methods to problems of recent general interest in nanotechnology whereby large computational experiments are now necessary
