this book contains selected and refereed contributions to the inter national symposium on probability and bayesian statistics which was orga nized to celebrate the 80th birthday of professor bruno de finetti at his birthplace innsbruck in austria since professor de finetti died in 1985 the symposium was dedicated to the memory of bruno de finetti and took place at igls near innsbruck from 23 to 26 september 1986 some of the pa pers are published especially by the relationship to bruno de finetti s scientific work the evolution of stochastics shows growing importance of probability

as coherent assessment of numerical values as degrees of believe in certain events this is the basis for bayesian inference in the sense of modern statistics the contributions in this volume cover a broad spectrum ranging from foundations of probability across psychological aspects of formulating subjective probability statements abstract measure theoretical considerations contributions to theoretical statistics and stochastic processes to real applications in economics reliability and hydrology also the question is raised if it is necessary to develop new techniques to model and analyze fuzzy observations in samples the articles are arranged in alphabetical order according to the family name of the first author of each paper to avoid a hierarchical ordering of importance of the different topics readers interested in special topics can use the index at the end of the book as guide

shanti s gupta has made pioneering contributions to ranking and selection theory in particular to subset selection theory his list of publications and the numerous citations his publications have received over the last forty years will amply testify to this fact besides ranking and selection his interests include order statistics and reliability theory the first editor s association with shanti gupta goes back to 1965 when he came to purdue to do his ph d he has the good fortune of being a student a colleague and a long standing collaborator of shanti gupta the second editor s association with shanti gupta began in 1978 when he started his research in the area of order statistics during the past twenty years he has collaborated with shanti gupta on several publications we both feel that our lives have been enriched by our association with him he has indeed been a friend philosopher and guide to us

statistical methods of discrimination and classification advances in theory and applications is a collection of papers that tackles the multivariate problems of discriminating and classifying subjects into exclusive population the book presents 13 papers that cover that advancement in the statistical procedure of discriminating and classifying the studies in the text primarily focus on various methods of discriminating and classifying variables such as multiple discriminant analysis in the presence of mixed continuous and categorical data choice of the smoothing parameter and efficiency of k nearest neighbor classification and assessing the performance of an allocation rule the book will be of great use to researchers and practitioners of wide array of scientific disciplines including engineering psychology biology and physics

fills a gap in book literature examines many new lagrangian probability distributions and their applications to a variety of different fields presents background mathematical and statistical formulas for easy reference detailed

bibliography and index exercises in many chapters may be used as a reference text or in graduate courses and seminars on distribution theory and lagrangian distributions

a survey of combinatorial theory covers the papers presented at the international symposium on combinatorial mathematics and its applications held at colorado state university csu fort collins colorado on september 9 11 1971 the book focuses on the principles operations and approaches involved in combinatorial theory including the bose nelson sorting problem golay code and galois geometries the selection first ponders on classical and modern topics in finite geometrical structures balanced hypergraphs and applications to graph theory and strongly regular graph derived from the perfect ternary golay code discussions focus on perfect ternary golay code finite projective and affine planes galois geometries and other geometric structures the book then examines the characterization problems of combinatorial graph theory line minimal graphs with cyclic group circle geometry in higher dimensions and cayley diagrams and regular complex polygons the text discusses combinatorial problems in finite abelian groups dissection graphs of planar point sets combinatorial problems and results in fractional replication bose nelson sorting problem and some combinatorial aspects of coding theory the text also reviews the enumerative theory of planar maps balanced arrays and orthogonal arrays existence of resolvable block designs and combinatorial problems in communication networks the selection is a valuable source of information for mathematicians and researchers interested in the combinatorial theory

statistical thinking is gradually becoming a part of our life there is hardly any field in which statistical data statistical techniques are not used keeping this in mind this book entitled introductory business statistics has been especially designed for the students of uttar pradesh national education policy course curriculum it would help the readers in developing problem solving skills and apply statistical techniques in real life situations sufficient number of business oriented problems and latest examination questions have been included in the book
