accounts in drug discovery describes recent case studies in medicinal chemistry with a particular emphasis on how the inevitable problems that arise during any project can be surmounted or overcome the editors cover a wide range of therapeutic areas and medicinal chemistry strategies

including lead optimization starting from high throughput screening hits as well as rational structure based design the chapters include follow ons and next generation compounds that aim to improve upon first generation agents this volume surveys the range of challenges commonly faced by medicinal chemistry researchers including the optimization of metabolism and pharmacokinetics toxicology pharmaceuticals and pharmacology including proof of concept in the clinic for novel biological targets the case studies include medicinal chemistry stories on recently approved and marketed drugs but also chronicle near misses i e exemplary compounds that may have proceeded well into the clinic but for various reasons did not result in a successful registration as the vast majority of projects fail prior to registration much can be learned from such narratives by sharing a wide range of drug discovery experiences and information across the community of medicinal chemists in both industry and academia we believe that these accounts will provide insights into the art of medicinal chemistry as it is currently practiced and will help to serve the needs of active medicinal chemists

this book addresses themes in the newly emerging discipline of philosophy of chemistry in particular issues in connection with discussions in general philosophy of science on natural kinds reduction and ceteris paribus laws the philosophical issue addressed in all chapters is the relation between on the one hand the manifest image the daily practice or common sense life form and on the other the scientific image both of which claim to be the final arbiter of everything with respect to chemistry the question raised is this where does this branch of science fit in with the manifest or scientific image most philosophers and chemists probably would reply unhesitatingly the scientific image the aim of this book is to raise doubts about that self evidence it is argued that chemistry is primarily the science of manifest substances whereas micro or submicro scientific talk though important useful and insightful does not change what matters namely the properties of manifest substances these manifest substances their properties and uses cannot be reduced to talk of molecules or solutions of the schrödinger equation if submicroscopic quantum mechanics were to be wrong it would not affect all or any microlevel chemical knowledge of molecules if molecular chemistry were to be wrong it wouldn't disqualify knowledge of say water not at the macrolevel e g its viscosity at 50 c nor at the pre or protoscientific manifest level e g ice is frozen water

green chemistry as a discipline is gaining increasing attention globally with environmentally conscious students keen to learn how they can contribute to a safer and more sustainable world many universities now offer courses or modules specifically on green chemistry green chemistry

principles and case studies is an essential learning resource for those interested in mastering the subject providing a comprehensive overview of the concepts of green chemistry this book engages students with a thorough understanding of what we mean by green chemistry and how it can be put into practice structured around the well known 12 principles and firmly grounded in real world applications and case studies this book shows how green chemistry is already being put into practice and prepare them to think about how they can be incorporated into their own work targeted at advanced undergraduate and first year graduate students with a background in general and organic chemistry it is a useful resource both for students and for teachers looking to develop new courses

packed with real world examples this book illustrates the 12 principles of green chemistry these diverse case studies demonstrate to scientists and students that beyond the theory the challenges of green chemistry in pharmaceutical discovery and development remain an ongoing endeavor by informing and welcoming additional practitioners to this m

training in clinical chemistry is acquired via different avenues that include didactic lectures on pathophysiology of disease methodologies and practical aspects of testing and through attendance of operations meetings sign out sessions seminars and tutorials there is little instruction on how to apply the vast amount of knowledge gained in the process to practice in other branches of medicine cases are regularly presented with clinical information and therapeutic interventions which form the basis of training diagnostic reasoning laboratory based case studies in clinical chemistry fills this gap for clinical chemistry the concise and practical approach of the book including real life scenarios is an excellent resource for pathology trainees clinical laboratory

science students clinical chemistry fellows clinical laboratory professionals and clinicians these cases help professionals remain competent in the field and be successful in their board exams the cases are stated as they present often with no or few clinical details accompanying the sample request with only barcoded samples arriving into the laboratory in a busy laboratory thousands of these cases are received daily and it is impossible to review the clinical information associated with the specimens there are no books with a similar approach and emphasis fills the gap in teaching by addressing the subject from a laboratory practical prospective with concomitant application of evidence based laboratory investigation presents laboratory data in tabulated format to resemble real life scenarios shows list of abbreviations and conversion factors cases begin with clinical presentation and information not available to those within the clinical laboratory discusses the differential diagnosis and suggests additional testing or investigations as necessary

this practical how to do book deals with the design of sustainable chemical processes by means of systematic methods aided by computer simulation ample case studies illustrate generic creative issues as well as the efficient use of simulation techniques with each one standing for an important issue taken from practice the didactic approach guides readers from basic knowledge to mastering complex flow sheets starting with chemistry and thermodynamics via process synthesis efficient use of energy and waste minimization right up to plant wide control and process dynamics the simulation results are compared with flow sheets and performance indices of actual industrial licensed processes while the complete input data for all the case studies is also provided allowing readers to reproduce the results with their own simulators for everyone interested in the design of innovative chemical processes
