palaeomagnetism and archaeomagnetism are fascinating specialized studies because they are applicable to such a wide range of problems in geology archaeology and geophysics they can also be undertaken cheaply when compared with most other geophysical techniques and at first sight simply in fact real comprehension of the magnetic processes that have occurred in rocks and other types of material over several thousands or many millions of years is still extremely difficult to assess and measure on this basis this book cannot explain all such features nor can it attempt to cover all the actual and potential applications of the method all that can be attempted is to give an impression of the ways in which such techniques can be used in a wide variety of fields and how these techniques are usually applied the magnetization of rocks is in fact one of the earliest of the true sciences but we are still not in a position to answer many of the problems posed consequently some of the examples given of applications are essentially state of the art comments rather than being a review as such the

changing position of the geomagnetic poles with time is still not adequately defined for example and some of the more recent conventional views are given although the emphasis is placed on more subjective probably more controversial evaluations

dykes occur in a wide variety of geological and tectonic settings and their detailed study through space and time is imperative for understanding several geological events dykes are believed to be an integral part of continental rifting and when they occur as spatially extensive swarms of adequate size they can be of immense utility in continental reconstructions and also help to identify large igneous provinces lips it is known that continental flood basalts and major dyke swarms have their origin related in some way to the up rise of hot mantle plumes which may lead to rifting and eventual continental break up dykes signify crustal extension and are important indicators of crustal stabilisation events supercontinental assembly and dispersal crust mantle interaction and play a significant role in the delineation of crustal provinces as well as in deciphering crustal evolution events many economic mineral deposits of the world are also associated with a variety of dykes the volume will provide state of the art information on all aspects of dykes with emphasis on the origin evolution and emplacement of dykes
