composite systems that integrate microelectromechanical and microelectrofluidic mef components with electronics are emerging as the next generation of system on a chip soc designs however there remains a pressing need for a structured methodology for mefs design automation including modeling techniques and simulation and optimization tools integrating top down and bottom up design philosophies microelectrofluidic systems presents the first comprehensive design strategy for mefs this strategy supports hierarchical modeling and simulation from the component level to the system level it leads to multi objective optimization tools valuable in all phases of the design process from conceptualization to final manufacturing the authors begin by defining the basic variables and elements needed to describe mefs behavior then model that behavior across three layers of abstraction the low level component high level reconfigurable architecture and bio chemical application layers they have developed a hierarchical integrated design environment with systemc and present its architecture and associated functional packages microelectrofluidic systems is visionary in its leverage of electronic design principles for microsystem design and heralds a new era of automated soc design the strategy it presents holds the potential for significant reductions in design time and life cycle maintenance costs and its techniques and tools for robust design and application flexibility can lead to the high volume production needed for the inevitably growing product market

the architect s primary source for information on designing for egress evacuation and life safety egress design solutions emergency evacuation and crowd management planning is written by proven experts on egress issues meacham and tubbs are engineers with arup an international firm with a stellar reputation for quality design and engineering their book examines egress solutions in terms of both prescriptive and performance based code issues a portion of the book focuses on techniques for providing egress design solutions and for coordinating egress systems with other critical life safety systems another part reviews historic and recent tragic life loss fire events as such this is easily the most comprehensive take on the subject written especially for architects

design optimization deals with the application of the ideas of optimization to design taking as its central theme the notion that design can be treated as a goal seeking decision making activity emphasis is on design optimization rather than on optimization techniques this book consists of nine chapters each focusing on a particular class of design optimization and demonstrating how design optimization problems are formulated and solved the applications range from architecture and structural engineering to

mechanical engineering chemical engineering building design and layout and siting policy the first five chapters are all concerned with design problems where it is convenient to express the goals in a single objective or criterion to be optimized in particular optimal space planning and shape optimization of structures are discussed along with approximation concepts for optimum structural design application of nonlinear programming to design and generalized steiner network problems in engineering design the last four chapters focus on multicriteria programming multicriteria optimization for engineering and architectural design and a system for integrated optimal design this monograph will be of interest to designers and others concerned with the use of optimization concepts and tools in design optimization
