planning theory expresses a sound unease about the direction taken by the current analysis and criticism of planning experiences both in the field of economics and in urban and regional planning instead of seriously revising the technical and scientific shortcomings marking the various problems encountered in the planning experience in both fields academic debates and reflection have instead led to a kind of political interpretation on the basis of the hopelessness of improving the governance of managerial and political planning initiatives planning theory has been reduced to a generic sociological debate on planning itself a debate that freezes planning as a permanently declining engagement to oppose this the present book aims to identify the essential guidelines of a re launch of planning

processes and techniques configuring a kind of neo discipline called planology by the author which builds upon a multi disciplinary integration never seen and experimented with until now of economic environmental and sociological approaches a crucial element missing in previous unsuccessful planning attempts

this book is recommended reading for planners preparing to take the aicp exam in this new book the author bridges the gap between theory and practice the author describes an original approach feedback strategy that builds on the strengths of previous planning theories with one big difference it not only acknowledges but welcomes politics the bogeyman of real world planning don t hold your nose or look the other way the author advises planners but use politics to your own advantage the author admits that most of the time planning theory doesn t have much to do with planning practice these ideas rooted in the planner s real world are different this strategy employs everyday political processes to advance planning trusts planners personal values and professional ethics and depends on their ability to help clients articulate a vision this volume will encourage not only veteran planners searching for a fresh approach but also students and recent graduates dismayed by the gap between academic theory and actual practice

a selection of essays concerned with the evolution of thought in the fields of both planning theory and education a joint treatment of these closely related themes adds to the understanding of planning theory as a conceptual basis for planning and aims to engender discussion of improvements to the education of planners
